Document Title:	Mini PCIe EVB kit User Guide		
Version:	1.00		
Date:	2014-05-05		
Status:	Release		
Document Control ID:	Mini PCIe_EVB kit_User Guide_V1.00		

General Notes

SIMCom offers this information as a service to its customers, to support application and engineering efforts that use the products designed by SIMCom. The information provided is based upon requirements specifically provided to SIMCom by the customers. SIMCom has not undertaken any independent search for additional relevant information, including any information that may be in the customer's possession. Furthermore, system validation of this product designed by SIMCom within a larger electronic system remains the responsibility of the customer or the customer's system integrator. All specifications supplied herein are subject to change.

SCOPE

This document describes how to use Mini PCIe EVB to do test; user can get useful information about the Mini PCIe EVB quickly through this document. This document applies to Mini PCIe products from SIMCom Company.

This document is subject to change without notice at any time.

3. Accessory Interface

3.1 Adapter Interface

Figure 4: Adapter interface

Table 1: 5V adapter interface

Pin	Signal	I/O	Description
1	Adapter input	Ι	5V/2.0A DC source input

3.2 Audio Interface

Figure 5: Audio interface

Table 2: Headset interface

Pin	Signal	I/O	Description
1	MIC1N	Ι	Negative microphone input
2	EAR1N	0	Negative receiver output
3	EAR1P	0	Positive microphone input
4	MIC1P	Ι	Positive receiver output

Table 3: Earphone interface:

Pin	Signal	I/O	Description
5	MIC2& Headphone	I/O	Auxiliary audio input/output

Note: The default audio channel is headset interface (MIC1 and EAR1), customer should connect the headset to the headset interface, and the sequence of the signal should match with table 2.

3.3 SIM card interface

Figure 6: SIM card interface

Pin	Signal	I/O	Description
1	GND	-	Ground
2	UIM_VPP	-	NC
3	UIM_DATA	I/O	External UIM card data signal
4	UIM_CLK	0	External UIM card clock signal
5	UIM_RST	0	External UIM card reset signal
6	UIM_VDD	0	Power source for the external UIM card
7	GND	-	Ground
8	UIM_DET	Ι	External UIM card presence detect signal, hot swap

Table 4: UIM card socket

3.4 Antenna Interface

Figure 7: Antenna interface

Note: This chapter takes SIM7250E as an example, the sequence of antennas maybe different, customer should refer to the relevant Hardware Design document.

3.5 UART port interface

Figure 8: UART ports

Main UART (Reserved) AUX UART (Reserved)

Table 5: Main UART port

Pin	Signal	I/O	Description
1	DCD	0	Data carrier detection
2	TXD	0	Transmit data
3	RXD	Ι	Receive data
4	DTR	Ι	Data Terminal Ready
5	GND		GND
6	-	-	-
7	CTS	Ι	Clear to Send
8	RTS	0	Request to Send
9	RI	0	Ring Indicator

Table 6: Debug UART Port:

Pin	Signal	I/O	Description
2	DEBUG_TX	0	Transmit data
3	DEBUG_RX	Ι	Receive data
5	GND		GND

3.6 LED Indicator and Switch

Figure 9: LED indicator and Switch

Figure 9 shows the indicator LED and function switch, the detail function please refer to table 7 and table 8.

Table 7: Working state of LED as list:

Ref No.	Name	Function description
D104	VCC3V3 indicator	Bright: system has the 3.3V power
		Extinct: system does not have the 3.3V power
HL104	WAKE indicator	Blinking one time when module wake up host
HL101	WWAN indicator	Refer to the HD document for details;

Mini PCIe _EVB kit_User Guide_V1.00

Smart Machine Smart Decision

		S S
HL102	WLAN indicator	Reserved for WLAN function
HL103	WPAN indicator	Reserved for WPAN function
HL201	USB indicator	Bright: USB cable inserted Extinct: USB cable does not insert

Table 8: Function of switch

Ref No.	Name	Function description
S101	VCC3V3 indicator	Bright: system has the 3.3V power Extinct: system does not have the 3.3V power
S103	RF Control switch	Switch down: module goes into airplane mode Switch up: module controlled by software
S104	PCM Clock enable switch	Reserved, switch at middle state

4. Test Interface

Figure 10: Test interface overview

4.1 J2001

Figure 11: J2001 interface

Table 9: J103 Interface Pin List

Pin	Signal	I/O	Description
1	WPAN	Ι	Reserved for WPAN
2	PCM_SYNC	0	PCM frame synchronization
3	WLAN	Ι	Reserved for WLAN
4	PCM_IN	Ι	PCM data input
5	WWAN	Ι	Network status indicator
6	PCM_OUT	0	PCM data output
7	W_DISABLE	Ι	Active low signal for wireless disabling (Airplane mode)
8	PCM_CLK	0	PCM clock
9	PIN37/PWRKEY	-	Reserved
10	NC	-	-

Smart Machine Smart Decision

14	NC		

5. EVB and Accessory

The EVB and its accessory are equipped as the Figure 14

Figure 14: EVB and accessory

Note: the headset is not included in the EVB Kit. S101 and S103 switch up and set the S104 at the middle position.

6. Illustration:

6.1 Power on module

The Mini PCIe module is designed with auto power on with power appears.

The procedure of power on the module described as the following steps:

- 1. Insert the module to the Mini PCIe EVB;
- 2. Equip the accessory as figure 14 shows; make sure the SIM card has equipped;
- 2. Plug in 5V DC adapter, and switch S101 to "ON" state, then D104 will lighten;

The module would power on, HL101 would flash at a certain frequency, and user can judge registering status of the module by the HL101. For detailed description, please refer to *document* [1].

6.2 Registering Network and making a call

User should setup the driver on the PC for the proper operation, The procedure of making a call described as the following steps:

- 1) User should power on the module as chapter 6.1 described.
- 2) Connect the micro USB cable to the USB connector;
- 3) Open the Hyper Terminal (AT command windows) on your computer.
- Check the serial port number: My computer (right click) →Manage → Device Manager → Ports (COM&LPT)

Figure 15: COM ports and modem

- 5) Use the Hyper Terminal to call the module as following steps:
 - Open the HyperTerminal: START \rightarrow All Programs \rightarrow Accessory \rightarrow Communication \rightarrow HyperTerminal.

• Configure the serial port number

SIMCom - HyperTerminal File Edit View Call Transfer Help E 20 20 20 11 E	Connect To
	Enter details for the phone number that you want to dial: Country/region: China (86) Area code: 21 Phone number: Connect using: SimTech HS-USB Modem 9000 SimTech HS-USB Modem 9000 COM6 COM7 COM5 COM4 TCP/IP (Winsock)

Figure 20: Connect the module

- 6) Click the "call" icon.
 - Typing the AT command. When module is powered on, user must firstly send "AT" to synchronize the baud rate. The default setting of the module is autobauding.
 - Use AT command ATD to make a call.

6.3 Downloading

This chapter introduces software upgrade process of SIM72X0 series modules. The update tool is "SIM72X0_UpdateTool_V1.0.exe". The following pictures show the upgrade process and other functional processes.

6.3.1 USB Port Specification

First user should connect the micro USB cable to module, and power on the module.

Then user could run the tool, after the tool is opened, it will scan the device, if the module is ready, the tool will display like the following picture.

Figure 23: Run the download tool

- 1: The upgrade files display area.
- 2: The upgrade process display area.
- 3: The progress bar shows the step function.
- 4: The progress bar shows the total function.
- 5: File selection button.
- 6: Device scan button.
- 7: QCN file backup button.
- 8: Firmware download button.
- 9: QCN file recover button.
- 10: Image files download button.
- 11: ISO file upgrade button.
- 12: Exit the program.

6.3.2 Firmware Update

First user should connect the micro USB cable to module, and power on the module. Then user could run the tool, Tool will scan the device automatically, if the module is ready, the tool will prompts the user to upgrade.

Figure 24: Browse the software package

[File path]

Upgrade FW or upgrade the AP file, user need to select the upgrade file path firstly.

SN	Document name	Remark
[1]	SIMCOM_SIM72X0_ATC_ EN_VX.XX.doc	
[2]	SIM7250_Hardware_Design _VX.XX	

II. Safety Caution

Table 13: Safety caution

Marks	Requirements
	When in a hospital or other health care facility, observe the restrictions about the use of mobiles. Switch the cellular terminal or mobile off medical equipment may be sensitive to not
	operate normally for RF energy interference.
X	Switch off the cellular terminal or mobile before boarding an aircraft. Make sure it is switched off. The operation of wireless appliances in an aircraft is forbidden to prevent interference with communication systems. Forget to think much of these instructions may lead to the flight safety or offend against local legal action, or both.
*	Do not operate the cellular terminal or mobile in the presence of flammable gases or fumes. Switch off the cellular terminal when you are near petrol stations, fuel depots, chemical plants or where blasting operations are in progress. Operation of any electrical equipment in potentially explosive atmospheres can constitute a safety hazard.
	Your cellular terminal or mobile receives and transmits radio frequency energy while switched on. RF interference can occur if it is used close to TV sets, radios, computers or other electric equipment.
	Road safety comes first! Do not use a hand-held cellular terminal or mobile when driving a vehicle, unless it is securely mounted in a holder for hands free operation. Before making a call with a hand-held terminal or mobile, park the vehicle.
sos	GSM cellular terminals or mobiles operate over radio frequency signals and cellular networks and cannot be guaranteed to connect in all conditions, for example no mobile fee or a invalid SIM card. While you are in this condition and need emergent help, please remember using emergency calls. In order to make or receive calls, the cellular terminal or mobile must be switched on and in a service area with adequate cellular signal strength.

Some networks do not allow for emergency call if certain network services or phone features

are in use (e.g. lock functions, fixed dialing etc.). You may have to deactivate those features before you can make an emergency call.

Also, some networks require that a valid SIM card be properly inserted in the cellular terminal or mobile.
